Welcome to Lawyer Up!

In this two-player game, you'll step into the shoes of a courtroom lawyer.

Choose your legal champion and use special keywords to craft a powerful closing argument. Impress an AI judge and tip the scales of justice in your favor. Each lawyer has a secret weapon, a unique keyword. Use your smarts to pick the right words and win the case. May the best lawyer emerge victorious!

How to play:

1. Choose who will be Player 1 (Prosecution) and Player 2 (Defense).
2. Take turns entering a number (1-4) to select your lawyer and default keyword from the choices available.
3. Pay attention to the randomly selected judge and case, these details will help you decide on which keywords to enter.
4. Player 1 enters 3 keywords one at a time. Keywords may contain multiple words such as "garden hose". Keywords will be checked for inappropriate language or subjects, and you may be asked to enter a different keyword.
5. After Player 1 has successfully submitted their keywords, the AI will generate and read the Prosecution's closing arguments.
6. Player 2 enters their 3 keywords one at a time. The previous rules apply for your keyword entries. Use your knowledge of the prosecution's closing arguments when selecting your keywords.
7. After Player 2 has successfully submitted their keywords, the AI will generate and read the Defense's final rebuttal.
8. The AI judge will then determine if the defendant is guilty (Player 1 wins) or not guilty (Player 2 wins) based on the final statements and their preferences as a judge.
9. A summary of the case will then display on the screen, and you may choose to email a copy of the case summary to one or multiple email addresses by separating them with a comma before hitting enter.
10. Press Enter when directed to reset the game and allow 2 new players to enter the courtroom.

Lawyer choices and their unique keyword:

Sleezy Sal
"Dumpster"

Miami Mike
"Cruise"

Logical Leo
"Reasonable"

Eloquent Emma
"Persuasive"

Judge choices and their preference:

Judge Judy	Judge Joe	Judge Jake	Judge Jane
Factual arguments	Emotional appeals	Weird arguments	Food related

Closing Arguments

Lawyer Up! Is purely for entertainment purposes, the lawyers, judges, and cases are made up and do not represent a real courtroom. This is a simplified version of a court case where the generated closing arguments and judge's preferences are provided to an AI model when making a final verdict.

Lawyer Up! Is powered by OpenAI's API capabilities. The GPT-4 API model is used to generate the closing arguments and decide the guilty or not guilty verdict of cases. The TTS-1 API model is used to provide real-time and natural sounding audio narration of the closing arguments and verdicts. TTS-1 is also used to generate the narration for the game although some of the default lines that don't change are not generated in real-time but have been pre-recorded and saved.
